

Art.-No.:6.0500.1000
6.0500.5000

0500

Active Thinner ++

Characteristics

2K-Thinner extra fast speeds up the drying time in use with UHS and HS Clearcoats. Replaces the addition of 0505 Thinner.

Tech Tip

The addition of 4CR 0500 in combination with 4CR hardener 0408 standard allows the replacement of the 4Cr hardener fast.

Application

4CR 0500 reduces the drying time of the clear coats 7250 and 7255. Especially recommended in winter at low temperatures. The dilution with 4CR 0500 improves the complete drying at room temperature and reduces the force drying time.

To be added just before use.

Process conditions: from + 10°c and up to 70 % air relative humidity.

Attention: the pot life will also be reduced (about 50 %).

Technical Data

Colour shade	colourless
Mixing ratio	- 20 % (replaces 0505 Thinner)
Thinners	not necessary
Spraying viscosity 20° C	please consult our Product Information for the base product
Pot life	Will be reduced with about 50 %

Storage and Transportation

Storage: at least 4 years, if stored in tightly closed original containers.
