Basecoat Thinner

Characteristics

Basecoat Thinner is a mixture of organic solvents for thinning BC lacquers.

The thinner is used to adjust the spray viscosity or generally to improve the spraying processability as well as to clean the tools.

Tech Tip

To ensure that the drying processes are correct, it is advisable to adjust to the specified Flash off time between the spray coats so that the solvents can evaporate.

Application

The amount which has to be added depends on the processing guidelines of the main product.

Make sure that the products are very mixed with 4CR 0505 2K acrylic thinner.

- Keep container tightly closed.
- Not near open flames, heat or Process or store ignition sources.

Also because the material can become electrostatically charged, ground properly when removed.

Abmessungen

6.0510.5000 - 5 l - Standard

6.0510.5001 - 5 l - Long

Technical Data

Density at 20°C: 0.879 g/cm³ (DIN 53217)
Viscosity at 20°C: 11 s (DIN 53211/4)

Storage and Transportation

Im verschlossenen Originalgebinde mindestens 3 Jahre lagerfähig.
