**7800**

## Cabin Protection

### Characteristics

4CR 7800 binds dust and color particles reliably to walls and ceilings of paint booths and avoids contamination of the surface that is to be painted. In doing so the emulsion stays transparent and water soluble. It can be applied with Airless, spray gun, brush or roller. The thin layer of tacky coat never sears whereby the film on the walls ensures reliable dust and overspray adherence. As soon as the layer of tacky coat is saturated of dust and dirt you can remove it simply with water and a sponge. After this you can lay on another thin film.

### Tech Tip

- Dust control in critical areas
- Protects walls of the paint booth against paint and binds dust particles and overspray.
- Specially qualified for windows and translucent elements. Does not affect light intensity and reflection.
- Easy handling and cleaning.
- Water soluble. Does not contain harmful ingredients.
- Coat with pistol, roller or brush.
- Cost effective consumption. Depending on the contamination the coat has to be renewed not until several weeks.
- 100 % ecologically friendly.

### Technical Data

Productiveness	8 - 10 m <sup>2</sup> /l depending on the kind of coating
Color	clear

### Storage and Transportation

Store it cool, dry and frost-protected.  
Date of expiry at least one year.
